# Design and technology in an exciting symbiosis

*Markus Rüegg and Gerhard Manfred Rokossa*

Two companies, one concept: Best products in terms of design and technology for a greater sense of well-being in any environment. Both partners stand for innovative, esthetically attractive shapes expressing an ultra-modern and timeless design. **Spartherm** is the market leader for high-quality and efficient heating applications in Germany. The spark has bridged the gap between these two companies, between industry and trade, and the outcome is an even more attractive set of designs for a living fire in the home. The symbiosis purist design with archaic steel and superlative fuel cell technology transforms fire into a new living dimension. This gives rise to excellent fireplaces for all those who are enthused by exceptional and unusual design.

# Fireplace as furniture for contemporary interiors

Regardless of whether those people are involved in architecture, energy usage, residential environments or materials - nowadays, we are all living differently. Cubic designs with many windows and open-plan spaces are enthusing growing numbers of people. In terms of environmental credentials, **Spartherm** ensures that its stoves deliver high efficiency, clean combustion and are CO<sub>2</sub>-neutral in operation. Our residential worlds have been transformed too. Open-plan layouts, large bright

rooms and, as the highest expression of home-comfort and well-being: the ancient fire within your modern living space. We may live incredibly diverse lives nowadays, and this diversity is reflected in the different ways we may choose to situate modern fireplaces in our homes: Installed against a wall or free-standing somewhere in the room. That is because, today, fire is so much more than fire - it is a sought-after item of interior furnishing, one that we experience through all our senses.

## *Architecture*

*Cubic, clear, flooded with light – Outside world and interior spaces blend into a holistic experience for the senses.*

## *Energy and the environment*

*The very latest of construction materials and efficient heating technology protect our resources and create a sense of comfortable well-being.*

## *Residential shapes*

*Flowing transitions between the different living spaces open up new perspectives for us.*

## *Material*

*Unusual materials, sensual textures and exciting colour combinations define highlights.*

# Square. Practical. Beautiful

Attachments and boxes are an ideal way of enhancing your own personalised 'fire island'. Available in four colour variants. Painted black, painted white, bare steel and chromium-plated steel can combine with these cubic elements to create exceptionally versatile 'feel-good interiors' – all centred around fire. Suitable for use as

storage compartments, a wood store, a stove bench seat or a sideboard – this modular system layout underscores the pleasurable impact on our senses and the appealing aesthetic properties of stoves. They create 'residential landscapes', favourite places, oases of retreat and a representative ensemble of fire and steel that warms the heart.

The fact that the practical can also be beautiful is proven by the modular items of steel furniture designed by **Markus Rüegg**.

Two basic shapes, four colours, five different heights and steel presented as a visually appealing material – the boxes and attached elements offer a wide variety of design options within a room.

# ARES 'steel fire furniture' – geometric beauty

Where fire and steel merge to form a single unit, then the time for ARES is upon us. Glass on 3 sides provides a clear view of the exciting interplay of living flames. 172 centimetres of pure geometric beauty. Seamless design, precision build and fascinating functionality. All these qualities characterised the ARES range of 'steel fire furniture'.
